## The Pets' Parasites Formula

« Our pets are hosts of external parasites, and the essential oils contained in the formula will protect them from the invasion of their coat by these pests, often carrying themselves other parasites.

It is essential to treat your pet's environment, whether inside your home for a cat or dog, or in adjoining buildings for large animals, such as stables and barns. »

**Ingredients :** Essential Oils of Cedarwood, Citronella, Eucalyptus, Peppermint, Pine, Rosemary, Sage, Sweet Orange, Tea Tree.

**Presentation :** 10, 15, 20, 30, 50 and 100 ml glass bottles.

**Shelf Life :** needs to remain tightly closed and stored away from light and heat. Best if used within 3 years after the manufacturing date printed on the label.

### Instructions:

#### Small animals:

For an anti flea, anti tick **shampoo**: dilute **5 ml** (1 tsp.) of the Parasites Formula in one liter of natural shampoo. Shake the bottle well so that it blends evenly. After applying the shampoo, leave 3 to 5 minutes before rinsing.

**"Spot-on"** method: between the shoulders of the animal, on its back, spreading out the hair, pour between **5 and 10 drops** of undiluted formula directly on the skin. Over time, the oils will spread, blending in the greasy film that protects the skin of your pet.

With a **brush** : in one or more times, pour **5 to 10 drops** of this undiluted formula on a brush, and use it to brush the animal.

Make a **flea collar** : pour a few drops of the undiluted formula on the inside of your pet's collar before it wears it.

**Spray** : in a small spray bottle, combine **10 drops** of the formula with **75 to 100 ml** of warm water, not boiling, and spray the contents on your pet's coat, agitating frequently your spray bottle to ensure good dispersion of the oils. Avoid eyes and mucous membranes.

#### Large animals:

Most methods described for small animals are also valid for large animals. However, direct and careful application of the undiluted formula with a **brush** seems preferable to others.

### ***The environment of your animal:***

This will require making a **spray** as follows:

- **15 drops** of Parasites Formula, to dilute in,
- **60 ml** (4 tbsp.) of alcohol, to dilute in,
- **4 liters** of water.

Follow well the steps of dilution, ensuring good homogeneity of the final blend. Shake your spray container before each use. Spray the places where your pets live.

### ***Frequency of use:***

Typically, a careful application of the "Parasites Formula" on the animal once every two weeks, and a careful treatment of the environment once a month is enough. However, depending on the season, and of variable risks of exposure according to the location to be treated, these frequencies can be increased without danger.

### ***Precautions:***

The "Parasites Formula" is described here as an example of a natural method that can be used in the care of pets. This formula cannot be used to diagnose or treat diseases in animals, or even be an excuse to discontinue treatments prescribed by your attending veterinarian. If in doubt about the health of your pet, ask your regular veterinarian.

Concentrated product: do not ingest. Avoid contact with eyes and mucous membranes. Keep out of the reach of children.

### ***Tips about « sprays »:***

***Sprays made with alcohol:*** the first step consists in thoroughly diluting the essential oils in pure alcohol, bought in pharmacy, or drugstore. The second step consists in adding this blend in the water contained in your vaporizer. Shake well. You do not have to use the vaporizer's content all at once. It can be stored, but you need to remember to shake the bottle before each use. *Do not use directly on your pet.*

***Sprays made without alcohol:*** for single use only, you can prepare a spray with warm water, not boiling, in which you pour your essential oils. It is very important that you shake your container before and during use.
